Claim 11; Fig 2 and R11810; 23pp; English.

The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988)

168:1255-1270. It encodes the first 8 and a half amino terminal

SCRs of CR1. The invention concerns analogues of "regulator of
                                                                                                                                28-APR-1992; 303826.
03-MAY-1991; US-695514.

The full-length protein, or its specified fragments are used to treat patients with immune disorders or a disorder caused by inappropriate complement activity. The protein is also used to treat thrombotic conditions in humans and animals. See also Q11643.

CR1-4 is a preferred truncated form and a number of specified substitution variants of it are claimed in which certain positions in SCR-2 which have been identified as important for the degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-9. The specification does not contain the CR1-4 sequence; the sequence given here was constructed from the full-length CR1 amino acid sequence having GENESEQ accession number R11810 and descriptions in the disclosure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      region

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           specified substitution variants of it are claimed in which certain positions in SCR-2 which have been identified as important for the degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-9. The specification does not contain the CR1-4 sequence; the sequence given here was constructed from the full-length CR1 amino acid sequence having GENESEQ from the full-length CR1 amino acid sequence having GENESEQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             accession number R11810 and descriptions in the disclosure.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The CDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of specified substitution variants of it are claimed in which certain positions in SCR-2 which have been identified as important for the degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-9. The specification does not contain the CR1-4 sequence; the sequence given here was constructed from the full-length CR1 amino acid sequence having GENESEO accession number R11810 and descriptions in the disclosure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 11; Fig 2 and R11810; 23pp; English

Database: pir62 (1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 43.995; Variance 69.824; scale 0.630

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Cloning of the 1.4-kb mRNA species of human complement factor
H reveals a novel member of the short consensus repeat
family related to the carboxy terminal of the classical
150-kDa molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Campbell, I.D.

J. Mol. Biol. (1991) 219:717-725
Three-dimensional structure of a complement control protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Norman, D.G.; Barlow, P.N.; Baron, M.; Day, A.J.; Sim, R.B.; Campbell, I.D.

Natsuume-Sakai, S.; Nonaka, M.; Nonaka, M.; Harada, Y. J. Immunol. (1990) 144:358-362

Demonstration of an unusual allelic variation of mouse factor H by the complete cDNA sequence of the H.2 allotype.
                                                                                                                                                                                       Kristensen, T.; Tack, B.F.
Proc. Natl. Acad. Sci. U.S.A. (1986) 83:3963-3967
Murine protein H is comprised of 20 repeating units, 61 amino acids in length.
                                                                                                                                                                                                                                                                                                                  protein beta-1-H

Blochem. J. (1994) 301:391-397
Cloning and characterization of a cDNA representing a
putative complement regulatory plasma protein from barred
sand bass (Parablax neblifer).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S77894
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   #formal_name Parablax neblifer #common_name barred sand bass

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 C4BP controls the classical pathway of complement activation. It binds as a cofactor to C3b/C4b inactivation (C3bINA), which then hydrolyzes the complement fragment C4b. It also accelerates the degradation of the C4bC2a complex (C3 convertase) by dissociating the complement fragment C2a.

Statistics:

Mean 44.764; Variance 62.937; scale 0.711

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

VITAMIN K -dependent protein and its complexes with vitamin K -dependent protein and its complexes with Proc. Natl. Acad. Sci. U.S.A. 80:34461-3465(1983).

C -!- FUNCTION. C4BP CONTROLS THE CLASSICAL PATHWAY OF COMPLEMENT ACTIVATION. IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT CALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C4B. IT CALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEX OF THE C4BC2A COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEX OF THE CABCA ALPHA CHAIN BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S CHAIN BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S CHAIN BIND WITH SERUM AMYLOID P COMPONENT.

C -!- SUBUNIT: DISULFIDE-LINKED CONPLEX OF C4BP ALPHA CHAINS AND 1 BETA CHAINS OF ALPHA CHAINS AND 1 BETA CHAIN. THE CENTRAL BODY OF THE ALPHA CHAIN, A 530 KD HOMOHEPTAMER OF ALPHA CHAINS OR A 500 KD COMPLEX OF 6 ALPHA CHAIN SAND 1 BETA CHAIN. THE CENTRAL BODY OF THE SIMILARITY: CONTAINS 8 SUSHI (SCR) REPEATS.

C -!- SIMILARITY: TO C4BP BETA CHAIN AND TO PIG APOLIPOROTEIN R.

C -!- CAUTION: IT IS UNCERTAIN WHETHER MET-1 OR MET-17 IS THE INITIATOR.

This SWISS-DEOR OF THE STATE CHAIN AND TO PIG APOLIPOROTEIN R.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FUNCTION: C4BP CONTROLS THE CLASSICAL PATHWAY OF COMPLEMENT ACTIVATION. IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRACMENT C4B. IT ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CHAIN BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S SUBUNIT: DISSUFIDE-LINKED COMPLEX OF C4BP ALPHA AND BETA CHAINS. SIMILARITY: TO C4BP BETA CHAIN AND TO PIG APOLIPOPROTEIN R. SIMILARITY: CONTAINS 8 SUSHI (SCR) REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EEKSCDNP-YIPNGDYSPL-RIKHRTGDEITYQCRNGFYPATRGNTA-KCTSTG-WIPA-
